

PEDLAS: Structural Coverage Optimization Framework

PEDLAS is a structural outcome-space optimization framework for binary betting markets. It does not predict football results; it compresses the enormous outcome space into an affordable set of diversified betting slips.

Market Selection

Choose only binary total-goal markets where the Under price is at least 1.20 so that every leg qualifies for Betway Win Boost. Typical markets include Under/Over 4.5, 5.5, or 6.5, provided the Under odds are ≥ 1.20 . Higher goal lines increase the structural coverage of common scorelines while preserving binary outcomes.

Binary Representation

Each selected match has exactly one outcome relative to the chosen line: Under (U) or Over (O). With L matches there are 2^L possible outcome strings.

PEDLAS Parameters

P – Probability Bias

Expected proportion of dominant outcomes (usually Under). Estimated from today's pool or historical data; not fixed.

E – Elimination Threshold

Maximum acceptable run of identical selections after ordering.

D – Diversity Constraint

Maximum legs from the same competition within one slip.

L – Leg Count

Number of eligible matches; determines search space and Win Boost tier.

A – Anchor Distance

Minimum distance from the all-Under anchor slip.

S – Slip Separation

Maximum similarity allowed between any two generated slips to reduce redundancy.

Algorithm Pipeline

1. Collect eligible Under ≥ 1.20 markets.
2. Build binary outcome space.
3. Apply P, E, D, L, A constraints.
4. Generate candidate slips.
5. Enforce S to maximize diversity.
6. Rank slips using optional scoring signals (odds, league history, line height, fixture type).
7. Select top K slips within budget.

Important Notes

PEDLAS is a coverage and optimization framework, not a prediction model. It does not increase the true probability of any individual outcome or remove bookmaker margin. Its objective is to spend a limited budget on a diverse, structurally plausible subset of possible outcomes while leveraging Win Boost on qualifying multi-bets.
